Solutions Architect and Fractional CTO with 10+ years delivering cloud-native platforms at scale, from Internal Developer Portals and microservice ecosystems to executive technology leadership across multi-domain product organisations. Proven track record building and scaling engineering organisations from zero, cutting cloud spend by 30%, reducing MTTR by 30%, founding AI & R&D functions, and driving 25%+ revenue growth across telecom, fintech, and strata management markets. 10+ cloud certifications across GCP, AWS, and Kubernetes; trusted by C-level stakeholders to translate architecture decisions into business outcomes and GTM strategy.

EXPERIENCE

Fractional CTO · *Xigenix*

May 2024 – Feb 2026

- Scaled the Sri Lanka engineering organisation to 40 headcount across 6 disciplines through structured hiring, OKR-linked skills training programmes, and quarterly capability assessments, sustaining depth across financial, strata management, and blockchain product verticals.
- Drove a 35% reduction in engineering rework by establishing architecture review gates and ADR practices across RoR, Python, .NET, React, and Node.js stacks, eliminating late-stage design corrections and unplanned re-engineering.
- Reduced lead time from commit to production by 40% through standardised CI/CD pipelines on AWS, lifting sprint delivery predictability to 90%+ on-time roadmap completion across all active teams.
- Aligned technology decisions with business goals and GTM strategy across 4 product verticals by bridging engineering leadership and commercial stakeholders, ensuring architecture choices enabled growth rather than created technical liability.
- Founded a dedicated AI and R&D function from zero, identifying automation and ML opportunities across product lines and delivering AI-assisted features within quarterly release cycles.

Solutions Architect · *iVedha*

Apr 2024 – Present

- Reduced engineer onboarding time by 40% by designing and delivering Platformnex, an Internal Developer Platform unifying tooling, service catalogs, and self-service workflows across 4 product domains and 20+ microservices, cutting time-to-first-deploy from weeks to days.
- Built a 30-engineer platform engineering organization from zero by defining hiring criteria, establishing technical onboarding programs, and creating an ownership-driven engineering culture, resulting in full organizational autonomy to own and evolve the platform.
- Reduced cloud infrastructure spend by 30% and cut deployment cycle time by 50% by architecting a GitOps-driven CI/CD platform on GCP and AWS using Terraform and Pulumi with fully automated provisioning pipelines.
- Improved platform-wide reliability by 25% by implementing end-to-end observability with distributed tracing, automated alerting, and standardized incident runbooks, reducing MTTD by 40% across all production services.
- Shortened pre-sales technical validation cycles by building Go-based MVP prototypes within 2-week sprints, enabling the sales team to demonstrate live platform capabilities to enterprise prospects and accelerating deal progression.

Solutions Architect · *Circles.Life*

Jan 2023 – Mar 2024

- Drove 25%+ annual revenue growth for the Australian market by owning end-to-end architecture and delivery across 25 microservices, aligning release cadences with commercial priorities and coordinating across product, engineering, and operations.
- Improved Net Promoter Score by 10+ points by redesigning critical customer-facing service flows (notifications, billing, account management), reducing support ticket volume and improving subscriber retention.
- Reduced MTTR by 30% and achieved sub-30-minute disaster recovery TTR by implementing automated failover, chaos engineering suites, and runbook automation, achieving zero catastrophic outages over 14 months.
- Reduced architecture review cycle time by 60% by authoring 12 reference architectures and reusable design patterns adopted across all active product teams, establishing a single source of architectural truth.

EXPERIENCE (CONTINUED)

Senior Engineer · Circles.Life (via Boolean Labs / Zone 24x7)

Jan 2021 – Jan 2023

- Contributed to Circles.Life's highest-revenue product launch of 2021 by engineering backend subscription and plan management services for the SG Family Plan, establishing it as the company's top-performing SKU.
- Eliminated manual order fulfillment errors by leading backend development of the end-to-end phone purchase flow with third-party payment gateway and courier API integrations, serving thousands of daily transactions.
- Maintained 99.9% uptime across 7 production microservices (Ruby on Rails, Golang, Node.js) by owning full operational lifecycle (on-call, capacity planning, and incident postmortems) with zero SLA breaches.

Python Developer · Bassetti Shanghai

Nov 2019 – May 2020

- Automated lead generation and data collection pipelines using Python web scraping and ML-based data categorization, directly reducing manual sales team effort and streamlining prospect targeting.
- Built end-to-end data workflows covering extraction, cleansing, annotation, and transformation of complex datasets, delivering actionable insights that informed marketing campaign strategy.
- Executed targeted email marketing campaigns and conducted in-depth market research to identify and profile potential client audiences.

Software Developer · AUM Creative Solutions

Sep 2016 – Sep 2019

- Owned the full lifecycle of desktop application development (design, deployment, testing, and ongoing support), collaborating closely with design teams to optimize end-user experience.
- Enhanced existing software reliability by diagnosing and resolving bugs, upgrading interfaces, and optimizing performance across multiple client-facing applications.
- Partnered with cross-functional teams to strategize, design, and implement resilient solutions while providing customers with product maintenance guidance.

EDUCATION

B.Eng. Mechatronics Engineering

Shenyang Aerospace University, China · 2018

SKILLS

Go

RECOGNITION

- Top Performer Award, Top 5% Engineering, Q3 2023 · Circles.Life
- Exceptional Spirit Award, Q4 2023 · Circles.Life
- 3rd Place Scholarship · 2015, 2018
- Outstanding Student Union Leader · 2017
- Progressive Student Scholarship · 2016

COMMUNITY

- Google Developer Group Sri Lanka
- FinOps Foundation

CERTIFICATIONS

- Generative AI Leader Certification · Google, 2026
- Application Modernization Pre-sales Technical Expert Badge · Google, 2026
- Migrate and Modernize Applications with Google Cloud · Google, 2026
- GCP Certified Cloud Developer · Google, 2025
- Gen AI Agents: Transform Your Organization · Google, 2025
- Gen AI Apps: Transform Your Work · Google, 2025
- Gen AI: Navigate the Landscape · Google, 2025
- GCP Professional Cloud Architect · Google, 2024
- GCP Certified Security Engineer · Google, 2024
- GCP Certified Cloud Engineer · Google, 2024
- GCP Cloud Practitioner · Google, 2024
- Solutions Architect Associate · AWS, 2024
- FinOps Certified Engineer · Linux Foundation, 2024
- Advanced Digital Transformation · IIM, 2024
- Agile Project Management Professional · Atlassian, 2024
- Certified Kubernetes Application Developer (CKAD) · Linux Foundation, 2023
- Blockchain Specialization · State University of New York, 2020
- Applied Data Science in Python Specialization · University of Michigan, 2018
